## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 19-21, 30-33 drawn to a process of producing a bioabsorbable, implantable substrate.

Group II, claim(s) 22-29, and 34-41, drawn to the bioabsorbable, implantable substrate.

Group III, claim(s) 42, drawn to drawn to a process of modifying a rate of bioabsorbability.

Group IV, claim(s) 43-48, drawn to a process of using the bioabsorbable, implantable substrate.

2. The inventions listed as Group I to IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention as in independent claim 42 does not define a special technical feature distinguishing the claimed invention over the prior art. The special technical feature is exposing radiation to the bioabsorbable implantable substrate composition comprising a polyglycolide, or lactone derived polymers (instant claim 40). The Shalaby (US 2004/0133237 A1) discloses a method of irradiating the medical device to control mass loss of medical devices by radiation does with electron beam (Paragraphs 5,6), which the medical devices composition comprise a high glycolide-based polymer which anticipates claim 42 of instant claim.

Art Unit: 1796

3. Accordingly, as the recited process does not make a contribution over the prior art, unity of invention is lacking and restriction is appropriate.

4. A telephone call was made to Daniel A. Monaco on July 22, 2009 to request an oral election to the above restriction requirement, but because of complexity of restriction requirement election did not result in an election being made.

5. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained.

Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double

patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
